Research Interests

Trustworthiness of LLMs and agents, agent security and verifiable reasoning, model fingerprinting, LLM evaluation. Background in the security and accountability of decentralized systems.

Work Experience

Industry

Sentient Labs

Dec 2024 – Present

Researcher

- Agent security: designed memory-injection attacks on deployed Web3 agents, and cross-user poisoning attacks on multi-user collaborative agents; follow-up work from AWS and Adobe Research builds on them.
- Verifiable reasoning: built tool-augmented evaluation of LLM reasoning and representation-aligned supervision toward faithful world models on chess testbed.
- Contributed to scalable LLM fingerprinting with a public [leaderboard](#), and to LiveCodeBench Pro, an olympiad-level coding benchmark.
- Organized Open AGI Symposiums at NeurIPS 2025 and UC Berkeley.

Witness Chain

2022 – 2024

Co-founder & Head of Research

- Established the research foundation for a verifiable physical trust stack: proof of location, proof of backhaul and proof of diligence.
- Built a unified coordination layer for decentralized physical infrastructure networks (DePINs), enabling trust-less coordination and shared value creation.
- Deployed across 6,000+ nodes worldwide and secured by over \$5B in restaked assets; the company raised an \$8M seed round.

Chainlink Labs

Summer 2023

Research Intern

Mentor: Dr. Dahlia Malkhi

- Developed “ticketing” for orchestrating atomic broadcasts across nodes, including a hybrid of managed and unmanaged regimes balancing adaptivity and resilience.

Kaleidoscope Blockchain

Summer 2021

Research Intern

- Built a product of a tokenized telco marketplace connecting network applications with infrastructure, with on-chain enforcement of payments and service-level agreements.
